

**Product:**

Corrugated Loose Void Fill Chips

**Typical Applications:**

Void filling & Cushioning

**Advantages & Benefits:**

Cost Effective  
Eco-Friendly (Made from production waste)  
Alternative to plastic loose fill or bubble wrap

**Construction:**

Fluted single wall corrugated strips

15 cubic feet (Cuft) of void fill material per box.

Box dimensions: 800 x 600 x 890mm

\*Product availability may vary as this is a production by product.

May contain varying corrugated colours and board spec's.

**Sustainability:**

\*Calculations based on baseline footprint figures of corrugated board according to DEFRA and industry estimates.

Void Fill Type	Carbon Footprint (kg CO <sub>2</sub> e/kg)	Notes
Repurposed corrugated chips	<b>0.10 KG</b>	Made from UK production waste
Recycled Paper Void Fill	0.80 KG	Includes energy for processing & converting to format
Plastic Air Pillows	1.5 - 3.0 KG	High production emission and end of life disposal
Biodegradable Starch Penuts	0.60 - 1.0 KG	Lower impact than plastic, but energy intensive to produce

**Additional Information**

Our Re-purposed Corrugated Void Fill is an eco-conscious packaging solution made entirely from UK-sourced corrugated board production waste. Instead of being discarded or recycled, this high-quality material is shredded and repurposed to provide reliable cushioning and protection for goods in transit.

With an ultra-low carbon footprint of approximately 0.10 kg CO<sub>2</sub>e per kilogram—up to 90% lower than traditional plastic or virgin paper alternatives—this product supports circular manufacturing and helps reduce environmental impact. Fully processed in the UK, it offers a local, sustainable, and cost-effective alternative for ecommerce, retail, and fulfilment operations seeking to minimise waste without compromising performance. Available in bulk loose-fill format, with custom quantities on request, it's a practical choice for businesses committed to responsible packaging.
